Video: How does SALSA digitalMLPA work?

This article was retrieved from support.mrcholland.com on Friday, 9th May 2025.

Note
This video is about digitalMLPA. For an introductory video about conventional MLPA, see this article.

SALSA® digitalMLPA™ is a technique for the copy number quantification of up to 1000 target sequences. The technique combines the conventional MLPA technology with next-generation sequencing (NGS). This animation explains how the digitalMLPA technique works.

For an overview of the digitalMLPA technology and its advantages, we recommend watching the video What is digitalMLPA?

Please note that subtitles are available.

In case you're unable to view the video on YouTube you can also watch it here.
