What are the Coffa (.coffa) files produced by Coffalyser digitalMLPA?

This article was retrieved from support.mrcholland.com on Saturday, 21st May 2022.

Coffa files (.coffa) contain the sequencing output and several analysis properties of a single digitalMLPA reaction. These files are produced in the first steps of the data analysis using data from the FASTQ file(s). As Coffa files are relatively small (typically <1 MB), they are a convenient alternative to FASTQ files to store or transfer the results from a digitalMLPA experiment. They contain all the information required for the data analysis by Coffalyser digitalMLPA.

Coffa files can be generated with a command line tool. This can be useful for NGS service providers that pool digitalMLPA experiments from several end users in a single sequencing run, as this allows the service provider to supply each end user with the sequencing output of their own experiment. The end users can continue the analysis of their own experiment(s) with Coffalyser digitalMLPA. The [Coffalyser digitalMLPA User Manual](#) contains instructions on how to use the command line for this purpose.

Each Coffa file contains the sequencing output of a single reaction. To analyse the results of an experiment, Coffa files for all reactions in the experiment are required.
